

SERVO CONTROLLED PALLETIZER

T-TEK TS- SERIES

The T-TEK TS Series Servo Palletizer is the fastest, most capable palletizer in the T-TEK line of equipment. It is designed to perform at the highest level of efficiency, the lowest cost to operate, and it is built to last. The design and construction of each component is focused on meeting one goal: Quality.

- Servo controlled Apron and End Compression handle cases gently, quickly, and accurately across the widest variety of case finishes or wraps
- Servo driven Hoist for the most gentle handling of full pallets, shortest layer drop from apron to pallet, and the fastest pallet change out in the industry.
- Regenerative Power Supply returns up to 40% of the energy used by the servos, resulting in an eco- friendly, energy efficient machine.
- High resolution touchscreen with extensive diagnostics simplifying trouble shooting and shortening down time. Includes striking visual images, comprehensive jog functionality, and a complete on- screen manual.
- Lightweight composite Apron slats flex to avoid damage with a low friction surface for consistent control of shrink wrap cases.
- Divider case slats use a case hardened pin to follow UHMW covered lanes to minimize wear and maintenance.
- A wide variety of case handling components designed to form even the most complex patterns reliably.
- Light curtains, door sensors, apron covers, and screens protect the operators while relaying diagnostic information.
